                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 -ITRYTRP----AAPLIQELRSIDQGLMLSWRSDVNSR 559 subunit (CRS) polypeptides and the polynucleotides encoding them. The receptors or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence encetted levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents cDNA encoding the mouse DCRS7 polypeptide.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Isolated antigenic human or mouse DNAX receptor subunit-like polypeptide useful for detecting antibodies generated in response presence of increased protein levels or immunological disorders -
                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to primate and rodent DNAX cytokine receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CDS

```
eq_name:
The invention relates to primate and rodent DNAX cytokine receptor subunit (DCRS) polypeptides and the polynucleotides encoding them. The receptors, or their portions may be useful as phosphate labelling enzymes to label general or specific substrates. The subunits may also be functional immunogens to elicit recognising antibodies, or antigens capable of binding antibodies. A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. This sequence represents mouse DCRS7 reverse
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           _documentation_block:

Exptor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides in vitro for the presence of Zcytor14 administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antiponists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents a cDNA encoding

Sequences AAS45925-AAS46231 represent DNA molecules encoding and PCR comparing the level of expression of a PRO polypeptides of the invention. The sequences of the comparing the level of expression of a PRO polypeptide in a test sample con comparing the level of expression in the test sample of normal cells, whereby a confidence in the manmal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammal. Mammals include dogs, cats, cattle, horses, sheep, comparing the mammals include dogs, cats, cattle, horses, sheep, comparing the mammals include dogs, cats, cattle, horses, sheep, comparing the contacted with it. A specific polypeptide can be used to stimulate tumour necrosis factor (NWP) alpha release from human comparing the proliferation or differentiation of chondrocyte cells. The comparing the proteins can be used to determine the presence of tumours and also comparing the proteins can be used to determine the presence of tumours and also comparing the proteins of tumour development, particularly adrenal, lung, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, colon, co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      22 - MAY - 2000;

A composition containing ant/agonists to the PRO polypeptides or individual components are useful for treating a mammal with an immune related disease, e.g. systemic lupus erythematosus, rheumatoid arrthritis, osteoarthritis, systemic lupus erythematosus, rheumatoid arrthritis, osteoarthritis, juvenile chronic arthritis, a spondyloarthropathy, systemic sclerosis, aridiopathic inflammatory myopathy, Sjogren's syndrome, systemic vasculitis, sarcoidosis, autoimmune haemolytic anaemia, autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chen J,

                                                                                                                                                                             thrombocytopaenia, thyroiditis, diabetes mellitus, immune-mediated renal disease, a demyelinating disease, an autoLimnune or immune-mediated skin disease, contact dermatitis, an allergic disease e.g. food hypersensitivity, asthma, a transplantation associated disease, or a chronic inflammatory demyelinating polyneuropathy. Treating a degenerative cartillaginous disorder comprises administering a PRO1122 polypeptide agonist, or antagonist to the mammal. Numerous examples of the diseases and disorders are given in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chen

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     2277 ATCCCCCGGGGACTCCCGCGCGCGGGA 2302
                                                                                                                                                                                                                                                                                                  The present sequence is the coding sequence for a human PRO polypeptide (secreted and transmembrane). The PRO protein, and PRO agonists, PRO antagonists or anti-PRO antibodies are useful for preparation of a medicament useful in the treatment of a condition which is responsive to the PRO protein, agonists, antagonists or anti-PRO antibodies. The PRO protein may also be employed as molecular weight markers for protein electrophoresis. The PRO coding sequence has applications in molecular biology, including use as hybridisation probes, and in chromosome and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Eighty four nucleic acids encoding PRO polypeptides, useful in molecular biology, including use as hybridization probes, and chromosome and gene mapping. -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      AGCGGAGCAAGTGTCCCGGGCCCTTCAGCCAGCCCTGGATAGCTACTTCC

A combination, e.g., including a DCRS can be used as an immunogen for the production of antisera or antibodies capable of distinguishing between other cytokine receptor family members. A purified DCRS can also be used as a reagent to detect antibodies generated in response to the presence of elevated levels of expression, or immunological disorders which lead to antibody production to the endogenous receptor. (e.g. polymerase chain reactions (PCR)) to detect and quantitate the presence of similar nucleic acid sequences in samples. They may also be used to study the expression and function of secretory proteins/membrane polypeptides and their role in metabolism. The polypeptides may be used as antigens in the production of antibodies against them and in assays to identify modulators (agonists and antagonists) of expression and activity. The antibodies and antagonists may also be used as therapeutic agents to down regulate expression and activity. The antibodies may also be used as diagnostic agents for detecting the presence of the polypeptides in samples (e.g. by enzyme linked immunosorbant assay (ELISA). Examples of diseases which may be treated include rheumatoid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                the production of antibodies directed against the proteins, and cDNA sequences, which can be used in vaccines. The polynucleotide sequences can be used in gene therapy. The polynucleotide sequences and the proteins they encode may be used in the prevention, treatment and diagnosis of diseases associated with inappropriate secretory protein/membrane protein expression. The nucleic acids and complementary sequences may also be used as DNA probes in diagnostic assays
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            which encode human secretory or membrane proteins represented by AAB88317 - AAB88419. Included in the invention are primers AAF93917 - AAF94295 and AAF62232 - AAF62235 which are used to isolate the

The invention provides a new human cytokine receptor desinated 2cytor14.

The zcytor14 can be expressed by standard recombinant methodology. The C cytor14 can be expressed by standard recombinant methodology. The C zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be CC used to screen biological samples in vitro for the presence of Zcytor14.

CC proteins, polypeptides and peptides having 2cytor14 activity can be CC administered to a subject who lacks an adequate amount of this recumatoid CC polypeptide, for treating inflammation and conditions such as rheumatoid polypeptide, for treating inflammation and conditions such as rheumatoid cc arthitis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 CC arthitis. Can be used to treat a subject who produces an excess of cc antibodies) can be used to treat a subject who produces an excess of cytor14. Zcytor14 nucleotide sequences can also be used to provide antibodies. Cc zcytor14 to a subject. The present sequence represents a cDNA encoding 2cytor14 to a subject. The present sequence represents a cDNA encoding a variant of the human cytokine receptor Zcytor14, designated Zcytor14. Cc The variant is a truncated form of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the receptor polypeptide and lacks cross the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of the condition of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   documentation_block:

This sequence was found to be present on human chromosome 3. AAY76124 to AAY76223 represent the secreted proteins encoded by the 97 human genes. The genes and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions can be diagnosed by determining the amount of the new polypeptides in a sample or by determining the amount of the new genes. Specific uses are described for each of the 97 genes, based on which tissues they
                                                                                                                                                                                                                                                                                                                                      New isolated human genes and the secretary polypeptides they encode, useful for diagnosis and treatment of e.g. cancers, neurological disorders, immune diseases, inflammation or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Human; secreted protein; cancer; tumour; developmental abnormality; foetal deficiency; blood disorder; immune; system disorder; inflammation; autoimmune disease; altergy; Alzheimer's disease; cognitive disorder; schizophrenia; arthritis; asthma; psoriasis; sepsis; skin disorder; atherosclerosis; diabetes; cardiovascular disorder; kidney disorder; disorder; endocrine disorder; infection; AIDS; leukaemia; therapy; chromosome 3; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention provides a new human cytokine receptor desinated Zcytor14. Eavytor14 can be expressed by standard recombinant methodology. The encoding nucleic acid is useful for detecting the expression of a Zcytor14 gene in a biological sample. Anti-Zcytor14 antibodies can be used to screen biological samples in vitro for the presence of Zcytor14. Proteins, polypeptides and peptides having Zcytor14 activity can be administered to a subject who lacks an adequate amount of this polypeptide, for treating inflammation and conditions such as rheumatoid arthritis. In contrast, Zcytor14 antagonists (e.g. anti-Zcytor14 antibodies) can be used to treat a subject who produces an excess of Zcytor14. Zcytor14 nucleotide sequences can also be used to provide Zcytor14 to a subject. The present sequence represents the human cytokine receptor Zcytor14 degenerate nucleotide sequence.
